

1. General $\hat{}$

This sensor uses a laser source to scan 270° field of view. Positions of objects in the range are calculated with step angle and distance. Sensor outputs these data through communication channel. This sensor supports the multi echo data output.

2. Structure

2-1.Strucure diagram

3. Important notes

(1) This sensor is not a safety device/tool.

- (2) This sensor cannot be used for human body detection as per the machinery directives.
- (3) Hokuyo products are not developed and manufactured for the use in weapons, equipments or related technologies intended for destroying human lives or causing mass destruction. If such possibilities or usages are revealed, the sales of Hokuyo products to those customers might be halted by the laws of Japan such as Foreign Exchange Law, Foreign Trade Law or Export Trade control order. In addition, Hokuyo products are for the purpose of maintaining the global peace and security in accordance with the above law of Japan.
- (4) Sensor emits laser for measurement. Sensor's operation may become unstable under the influence of strong interference light or when emitted lights are not reflected back from the object.
- (5) Sensor's operation may become unstable due to rain, snow and fog or due to dust pollution on the optical window.
- (6)Rules and regulations related to safety should be followed strictly when machine users and system designers operates the sensor.

(7)Before using the sensor, please read carefully and understand this specification.

Title

UST-30LX Specification

HOKUYO AUTOMATIC CO.,LTD

(*2) Under the factory standard testing conditions using white kent sheet. Δ

In the low temperature environment of -11° C or below, the detection distance will be as below.

white kent sheet: 0.05m to 25m, diffuse reflectance 10%: 0.05m to 8m

(*3)The protective structure of Ethernet and Power connector is not IP67.

HOKUYO AUTOMATIC CO.,LTD

5. Measurement Data

Distance Value (x)	Meaning		
x < 10	Output numerical number "4" as Measurement error		
$10 \leq x \leq 60000$	Valid distance [mm]		
x > 60000	Output numerical number "65533"		
x > 00000	as Measurement error (object does not exists or object has low reflectivity)		

6. Connection

6-1. Power source, I/O cable

connector : DF62B-6EP-2.2C Hirose Cable length: 1000mm Keep the output wires open or connect to output "Com Output -" if not in use.

🕮 HOKUYO AUTOMATIC CO.,LTD

10. Multi-echo function \hat{A}

This sensor provides a maximum of three echo $(1^{st}, 2^{nd}, last)$ for each step (one direction). It also provides distance value and level value for each step.

Multiple echo are generated when the laser beam is split by reflection on surface of transparent objects, reflection on object's edge and reflection from small particles such as rain, mist, dust and fog. Thus, distance and level value obtained from the multiple reflections in the same direction is called multi echo. However, if the distance between two object is too close or the object has low reflectance, the sensor may not detect it as multi echo.

11. Ethernet Setting

1. The setting value is as below.

IP Initial value :192.168.0.10

Port number :10940

2. About changing IP address

It is possible to change and reset the IP address using a specialized application (IP Discovery).

For details on installation and operation of IP Discovery, Please refer to IP discovery manual. (C-41-02603)

12. Cautions for operation

This sensor uses high speed processing components that generate heat during operation. The heat is concentrated at the bottom of the unit. When mounting, please attach the bottom of the unit to a good heat sink. A 200mm x 200mm x 2mm aluminum plate is recommended as a heat sink.

If multiple sensors are installed side by side, a sensor might mistake the laser pulses of other units as its own and the detection error occurs. When it happens, usually the error lasts for one or two steps of measurement. Please use software filters to handle this type of error.
